Education

- Bachelor of technology
(computer engineering)
Sripatum University
- High school Graduated (science-math)
DarunaRatchaburi

SKILLS

- Programing Language
 - SQL
 - HTML
 - C, C++
 - Python
- Tool
 - VS Code
 - React
 - GitHub
 - Mysql
 - Figma
- Hardware assembly
- Problem-solving
- Time-management

Language

- english
- thai

ABOUT ME

A forth-year Computer Engineering student at Sripatum University with a solid foundation in programming, digital system design, and hardware integration. Passionate about IoT and software development, eager to learn new technologies, and highly motivated to apply knowledge and skills in real-world projects.

EXPERIENCE/ACTIVITIES

- Project: Smart Agricultural Management System
 - Design an ESP32 board and order it for actual use
- Project: Library Management with SQL
 - Design database and some backend
- Project: IoT Shrimp Farm
 - Manage the database system by designing what tables should be used to store data.
- Project: V-Fresh App selling farmers' produce
 - Do frontend and backend and manage the database including the live system
- Project: SPU Smart-Cozy Ecosystem AI simulation system that analyzes and controls the temperature in a smart classroom
 - Connect the API system and design part of the database
- Design the operation of an 8-bit CPU
 - Write code in Xilinx using VHDL and Verilog to program for FPGA and SoC
- Management of ISO 29110 documents
 - Take the PM position, organize documents, and create some use cases and diagrams
- Research on Active-Active Network design, data management, and server backup for banks
 - Take the SA position and design system diagrams

certificate

- AWS Academy - Machine Learning Foundations
- Huawei ICT Academy - HCIA-IoT V3.0 Course
